Education

COMSATS University Islamabad

2022 - 2026

Bachelor of Software Engineering

Abbottabad

- Courses: Programming Fundamentals, Software Engineering Concepts, Data Structures and Algorithms, Operating Systems, Software Design and architecture, Software Construction, Object Oriented Programming, Artificial Intelligence, Web Development, App Development

Work Experience

Robotics World PVT

Apr 2026 – Present

Junior Backend Engineer

IT Park, Abbottabad

- Worked as a backend engineer across multiple in-house and client projects – SteamMinds, Bridgexis, VR Labs, and Uplaw – fixing daily bugs and contributing to backend development.
- Fixed daily bugs and built the authentication module and website management module for SteamMinds, a STEM education platform offering interactive, gamified 3D learning experiences for K-12 students.
- Built the authentication module and website management module for Bridgexis, a consultancy platform for abroad study guidance.
- Designed and developed the complete backend and system architecture for VR Labs, a virtual reality lab simulation platform.
- Contributed backend fixes and feature support for Uplaw.

Triox

Jan 2026 – Mar 2026

Junior Frontend Engineer

Sadeeq Plaza, Abbottabad

- Worked as a frontend developer across multiple client projects – ExactFlow, an AI-powered multichannel eCommerce management platform; ExactSolution, a refurbished MacBooks and laptops eCommerce platform; and Dalile, a UAE property search platform.
- Fixed daily bugs, added new features and screens, and improved UI consistency across all three platforms.
- Integrated RESTful APIs and implemented efficient state management, ensuring seamless data flow and reducing UI rendering issues.
- Collaborated with backend and design teams to deliver scalable features, improving platform usability.

Projects

Bridgexis | Website – MERN Stack

- Built a consultancy platform for abroad study, offering complete visa guidance, fee details, rent information, and related services for students.
- Developed the authentication module and the website management module of the platform.

ALIF (Advanced Learning of Islamic Fundamentals) | MERN Stack

- Developed a cross-platform Quran learning application featuring live one-on-one classes, AI-based pronunciation feedback, gamification, and an Islamic knowledge hub.
- Implemented role-based modules for students, teachers, and administrators, including teacher verification, class scheduling, payments, and content management.

VR Labs | Website – *MERN Stack*

- Built a virtual lab platform that lets students interact with lab equipment in 3D virtual reality and perform the same experiments and tasks done in real physical labs.
- Designed and developed the complete backend and system architecture of the project independently.

Technical Skills

Languages: TypeScript, JavaScript, Python, HTML5, CSS3

Developer Tools: Postman, VS Code, Git, GitHub, Chrome DevTools, Figma, Draw.io, Cursor, Slack, Asana.

Libraries/Frameworks: ReactJS, MongoDB, Mongoose, NextJS, Express, NodeJS, Tailwind CSS, Redux, React-Query, Clerk, Cloudinary, Inngest, OAuth, WebSockets, JSON Web Token, Bcrypt, Express-validator
